

CodeDroid: Executable Task State Management

From implicit conversation history to explicit, executable progress management

WITHOUT LEDGER

Long screenshot history
old failures fade below the context window
next action is guessed from prose

Progress as text history -> progress as executable code

screenshot

tap

thought

swipe

error

repeat

WITH CODEDROID

ledger.sh
structured task / subtasks / reflection / validation
next action is read from persistent state

update_ledger

reflect_on_ledger

validate_ledger

The screen changes. The executable ledger remembers.
