

CodeDroid: Executable Task State Management

Three coordinated layers: agent reasoning, first-class tools, runtime state

HYBRID CODING AGENT

Current screenshot + UI tree + ledger state
-> choose the next tool

FIRST-CLASS TOOLS

GUI
tap / swipe / type_text

RUNTIME STATE

Android device observations

TASK STATE
update / reflect / validate

```
ledger.sh
executable task state
```

CLI
bash / adb / filesystem

Terminal + filesystem command results

Progress management becomes an explicit, executable tool action.
